

StudioIntegrator

- keeping SuperOffice CRM up to date!

Studio**Integrator** handles all your needs for data import to SuperOffice CRM.

Studio**Integrator** is a *data import* application with a great set of features to help you easily import data to SuperOffice CRM.

1. Connect from most available data sources like SQL databases, csv/txt files, XML files, web services and OleDb.
2. Define key field(s) and set up field mapping
3. Use *formulas* and *transformations* to convert or adjust input data prior to import
4. Run import jobs manually or used the built-in job scheduler.

Studio**Integrator** handles both small simple import jobs and large complex system migrations from several different data sources at the same time.

Import information to all SuperOffice CRM entities like *Contacts, Contact Persons, Activities, Sales, Projects* - including all user defined fields in SuperOffice CRM.

Use Studio**Integrator** to run unattended frequent import jobs from many different data sources like your company's ERP system, data warehouse, and support system or web services.

What do I get?

- Ready-to-use *Data Transfer* software for SuperOffice CRM
- Connectivity to most data sources like SQL, XML, csv/txt files, web services, OleDb
- Data set designer connects to multiple data sources and create relations between them
- Field mapping interface
- Transformation and conversion of input data. Do calculations, group, count and sorting prior to import

Basic requirements

- SuperOffice 6.1+
- Windows Server 2000, 2003, 2008
- IIS 5,6 or 7
- .NET Framework 2.0
